1. Project Overview

My Learning Guide is a small educational website created for beginner students who want to learn the fundamentals of HTML and CSS. It introduces HTML structure and common elements, CSS syntax and styling, the CSS box model, responsive design, and the development process. The site contains four main pages: Home, HTML Basics, CSS Basics, and Process.

The intended audience is students who are starting to learn web development. The goal was to make the information easy to navigate, provide short examples, and demonstrate the use of semantic HTML and a shared external stylesheet.

2. Website Structure and Sitemap

The project is organised into separate folders. The root folder contains index.html and README.md. The pages folder contains html-basics.html, css-basics.html, and process.html. The css folder contains styles.css, while images stores the five gallery images and documents stores the project report.

The navigation menu connects the four pages. The Process page includes a sitemap and the project report download link. The published website is available at https://ahmedhossen54859.github.io/pw1-hossenx/.

3. Design and Implementation

Semantic elements such as header, nav, main, section, figure, figcaption, and footer are used to give the pages a clear structure. The HTML Basics page includes a captioned table that describes common HTML elements. The website also includes a feedback/contact form with labelled controls, and a gallery of five images with alternative text and source/licence credits.

A shared external stylesheet controls typography, colours, spacing, navigation, the table, form controls, and gallery layout. Keeping the presentation in one CSS file makes the pages more consistent and easier to maintain.

4. Responsive Design

The layout uses CSS Grid and a media query to adapt the gallery and navigation for smaller screens. The gallery changes to one column on narrow screens, and the navigation becomes vertical. Screenshots were captured for a mobile viewport of approximately 360 pixels and a desktop viewport of approximately 1280 pixels; the user confirms that the remaining responsive checks were completed.

5. Testing and Validation

The supplied W3C Nu HTML Checker screenshots show no errors or warnings for index.html, html-basics.html, and process.html. The W3C CSS Validator screenshot for styles.css shows “Congratulations! No Error Found.” These statements describe the specific screenshots available for this report and do not claim that every HTML page has a separately included validator screenshot.

During testing, process.html was mistakenly submitted to the CSS Validator. The validator could not import the local stylesheet from that HTML file and displayed an import error and a link-type warning. This result was caused by validating an HTML document with the CSS validator; it was not evidence of a CSS syntax error. The stylesheet was then validated directly, and the supplied final result reports no CSS errors.

The testing process also included browser checks of the published website, navigation, gallery images, and responsive appearance. The project owner confirms that the contact form, sitemap, viewport checks, and remaining functional checks have been completed. The report-download link has been added to the Process page and checked on the published website.

6. Image Sources and Licences

The home page contains five CSS box-model images. Their original Wikimedia Commons file pages are listed below. The author and licence text shown in the website captions should match each original file page.

Image file	Original source page	Licence recorded
Box_model_CSS.png	https://commons.wikimedia.org/wiki/File:Box_model_CSS.png	CC BY-SA 4.0 (as recorded in project credits)
Box-model.webp	https://commons.wikimedia.org/wiki/File:Box-model.svg	GNU Free Documentation License 1.2 or later (as recorded in project credits)
Boxmodell-detail.webp	https://commons.wikimedia.org/wiki/File:Boxmodell-detail.svg	CC0 1.0 Universal (as recorded in project credits)
CSS_BOX_MODEL.png	https://commons.wikimedia.org/wiki/File:CSS_BOX_MODEL.png	CC BY-SA 4.0 (as recorded in project credits)
Css_box_model.webp	https://commons.wikimedia.org/wiki/File:Css_box_model.svg	CC BY-SA 4.0 (as recorded in project credits)

Licence references: CC BY-SA 4.0 — https://creativecommons.org/licenses/by-sa/4.0/ ; GNU Free Documentation License — https://www.gnu.org/licenses/fdl-1.3.html ; CC0 1.0 Universal — https://creativecommons.org/publicdomain/zero/1.0/.

7. Problems Encountered and Solutions

One practical issue involved relative paths. Files inside the pages folder need paths such as ../index.html and ../css/styles.css to reach files in the root folder or the CSS folder. The links were checked in the browser as part of the development process.

Another issue occurred when process.html was submitted to the CSS Validator instead of validating the stylesheet itself. The validator could not import the local CSS file in that context. The stylesheet was subsequently checked directly using the CSS Validator, which reported no errors.

8. Declaration on the Use of Artificial Intelligence Tools

ChatGPT (OpenAI) was used as a supplementary learning and technical support tool during this project. It helped me understand HTML and CSS concepts, including semantic HTML, the CSS box model and responsive design. I used AI-generated examples to support my learning and adapted the implementation according to my understanding. ChatGPT also helped me identify possible errors in HTML structure, image paths and links. I reviewed the suggested corrections and used relevant feedback to improve my code. AI was used to review parts of the project against the assignment requirements and identify areas for improvement. I am responsible for the final implementation and will verify the code, image licences and actual testing results before submission.

9. Conclusion

The project demonstrates a four-page educational website built with semantic HTML and a shared CSS file. It includes learning examples, a table, a feedback/contact form, a five-image gallery, a sitemap and responsive layout behaviour. The validation screenshots document successful checks for the files shown, and the report records the validator-input issue encountered during testing. The project is published through GitHub Pages, and the report download link has been added to the Process page and checked on the live site.

List of Figures

Figure 1. Project repository on GitHub showing the project files and folders.

Figure 2. GitHub Pages settings showing the published website address.

Figure 3. Published home page showing the navigation and CSS Box Model Gallery.

Figure 4. HTML Basics page showing the example lists and Common HTML Elements table.

Figure 5. W3C Nu HTML Checker result for index.html — no errors or warnings.

Figure 6. W3C Nu HTML Checker result for html-basics.html — no errors or warnings.

Figure 7. W3C Nu HTML Checker result for process.html — no errors or warnings.

Figure 8. W3C CSS Validator result for styles.css — no errors found.

Figure 9. Initial CSS Validator error after process.html was submitted to the CSS validator.
